

Names of Team in Switzerland:

Jeffrey Medina de la Rosa, Loris Hitz

Unfortunately, we don't have any participants who'd like to work with us at the moment.

Project Name:

Airplane food and it's production

Questions we want to answer

- How can a salad stay fresh in 10'000 meters a.s.l.?
- Does the food lose it's healthy ingredients?
- Do the producers look out for seasonal and resourceable meals?
- How much energy do they need to reheat the meals in the aircraft?

Where do we get our information from

- Interview (with responsible persons from the airlines)
- Blogs
- Internet (
- Newspaper (specially from the aviation industry)

Material needed

- Audio recording
- Photographs
- Laptops, Computers
- E-Mail
- Time

How is our project going to look like?

We want to answer our main questions, we want to deliver an interesting insight into the subject matter and maybe we can also show some disadvantages that may come up with airplane food. But of course, we'd like to include the inputs from the students abroad.

-

Timetable

Week 1: get in contact with potential team members from abroad
Week 2: brainstorming and collecting ideas from our colleagues from around the world
Week 3: create first specific concept
Week 4: work on different topics of our project
Week 5: collect all information and put them together
Week 6: final corrections and additions
Week 7: post our project on "don't waste my energy" and "the horse"

Responsibilities:

Jeffrey: Internet research, collection of industry news
Loris: Internet research, Interview

This is the way we planned our project so far. The outcome of the project will also depend on the contributions of our future team members.

Don't hesitate to contact us if you have any questions or ideas to improve our project.

Best regards Jeffrey and Loris
